

# RSSP PROCEDURE IN BLOXICO SOFTWARE SOLUTIONS

**REQUIREMENT** - The request in the form of a document or detailed specifications should come from the client. Since the scope is created based on this document, it is crucial to have clarity on what functionalities are required, as well as their priorities. Unclear requirements will not be taken for scoping, sizing and phasing.

If the client does not have a clear specification of the request, and if the request is in our domain of expertise, Bloxico will make an offer to the client to produce the clear requirement. The pricing is determined based on the effort and resources required to produce it.

**SCOPE** - The solution scope is created by our Product Owners based on a previously clearly defined requirement. It is done in the form of user stories that are sent to the development team for estimation.

**SIZING** - Once the scope reaches the Development team, each engineering tribe estimates their respective part that they will be working on in the future and coordinates with their colleagues regarding co-dependencies.

**PHASING** - After sizing, the Project Managers perform phasing to obtain accurate information about parallel development components, the overall project duration and a time leg required from acceptance of offer by the client and the project commencement date. After the phasing process, the solution **COSTING** is determined, and a comprehensive **SOLUTION PROPOSAL** is sent to the client.

The whole process typically takes 5-10 working days and it is free of charge, providing there is a clarity and absence of changes in the requirement.
